

AFD

Feature:	What is it?	What it means to you:
Automated Delivery	An electronic monitoring system is installed in the bulk fuel tank. When the fuel drops below a predetermined level, the monitor sends a signal to the fuel distribution center, and we route the nearest delivery truck to fill the tank.	Increased Productivity – No more checking tanks, calling in orders or waiting for delivery. Fuel is there when you need it.
Deferred Billing	Each month, the monitor in your tank calculates the amount of product you have used, and you are billed for that amount, even though your tank is kept at a predetermined level.	Improved Cash Flow – Because you pay for fuel as you use it, you'll have more cash on hand for other business.
Average Monthly Pricing	A valuable risk management tool. Rather than paying the price posted on the day the fuel was delivered (or used), you'll be charged the average price for that entire month.	Reduced Price Volatility – Average Monthly Pricing can substantially reduce your price risk. You don't need to worry about what the market will do next, or wait to order in hopes that fuel prices will drop.
High Performance Products	Cenex delivers top quality fuels that keep your equipment running smoothly, including Ruby Fieldmaster® Premium Diesel Fuels.	Peace of Mind – Take comfort in knowing you're getting a top-quality, proven product from people you can depend on.
Online Tank Monitoring	Authorized users can log onto cenex.com to access tank level information, average fuel and historical fuel usage at any time.	Information at Your Fingertips – You're better equipped to manage fuel inventory and anticipate future needs. This online feature is especially convenient if you have fuel tanks at several locations.
